EDUCATION

Western Governors University

Bachelor in Computer Science

Falls Church, VA

Aug 2024 - Expected Graduation Dec 2026

Northern Virginia Community College

A.S. in Computer Science

Annandale, VA

Aug 2021 - May 2023

Relevant Courses

Object-Oriented Programming, Data Structures, Full Stack Web Development, Data Management Applications

TECHNICAL SKILLS

Languages: Java, JavaScript

Frameworks: React, Bootstrap, Nightwatch.js

Technologies: Git, RapidAPI, Node.js, Postman, PostgreSQL

EXPERIENCE

Verizon

Software Engineer Intern

Ashburn, VA

Jun 2024 - Aug 2024

- Conducted end-to-end testing of the Application Design Tool (ADT) and underlying APIs, ensuring seamless integration and functionality by designing and implementing the Page Object Model (POM) to improve test maintenance and readability
- Automated the testing process using automated frameworks such as Nightwatch.js, implemented parallel testing to further enhance efficiency, and created a robust foundation from scratch to facilitate future expansion by engineers
- Achieved a 87% increase in testing efficiency compared to manual testing, reducing the time required to run test cases from 2 minutes to just 16 seconds per case by implementing effective test automation strategies and tools

Verizon

Software Engineer Intern

Falls Church, VA

Jan 2024 - Jan 2024

- Developed the frontend of the newly improved Verizon Cloud Platform using Tailwind CSS, Next.js, and React, simplifying the customer experience with an easy to use UI and improving developer experience with a new codebase
- Connected frontend of the web app with the appropriate backend APIs as well as a PostgreSQL database, helping unify the data from multiple sources into one application
- Presented new design to stakeholders and Verizon leadership, received positive feedback for streamlining internal processes and delivering on a project with high business impact

PROJECTS

Mathropolis

Oct 2024 - Current

- Connected PostgreSQL to the Node.js server using Supabase
- Developed a user authentication system with login and signup functionality that validates existing users
- Tested API calls with Postman and integrated Supabase as the database for reliable account management and validation
- Will implement Socket.IO to add a real-time chat feature

Discord Bot

Apr 2023 - Apr 2023

- Leveraged the Discord API to create an interactive bot that retrieves job listings from RapidAPI to access the Indeed API based on user-defined parameters, such as job position and location
- Enhanced user experience by implementing '!help' command to guide users on command format and structure
- Created individual project with JavaScript and Node.js using the Discord API

AWARDS

Verizon

Jul 2024

- Winner of Verizon Volunteer STEM Next
- Collaborated in a group of 6 and presented project to the sponsors of STEM Next
- Supported STEM Next's mission to build a STEM learning ecosystem

Hackathon

Oct 2023

- Winner of the PatriotHacks hackathon at George Mason University
- Developed "Pixel Fit," a cross-platform mobile app with React Native using RPG video game elements to promote fitness and health
- Led a team of 4 in designing the user interface and experience
